

Broodstock development – West Atlantic AS

In close collaboration with Akvaplan Niva, Denvo further developed from broodstock farming to full-fledged fry production.

Akvaplan Niva's new experimental and innovation station, FISK, The facility has been developed for full-scale fry production and experimental experiments.

Main goal: Bring Denvo to a unique position the sale of fry and further development of large-scale food fish production.

The collaboration ensured the company state-of-the-art hatchery and fry facilities, access to world-class research and proximity to high expertise.
